

Uninstallation of SysTools Software from Windows OS

Users can uninstall the software through the Windows Search Bar.

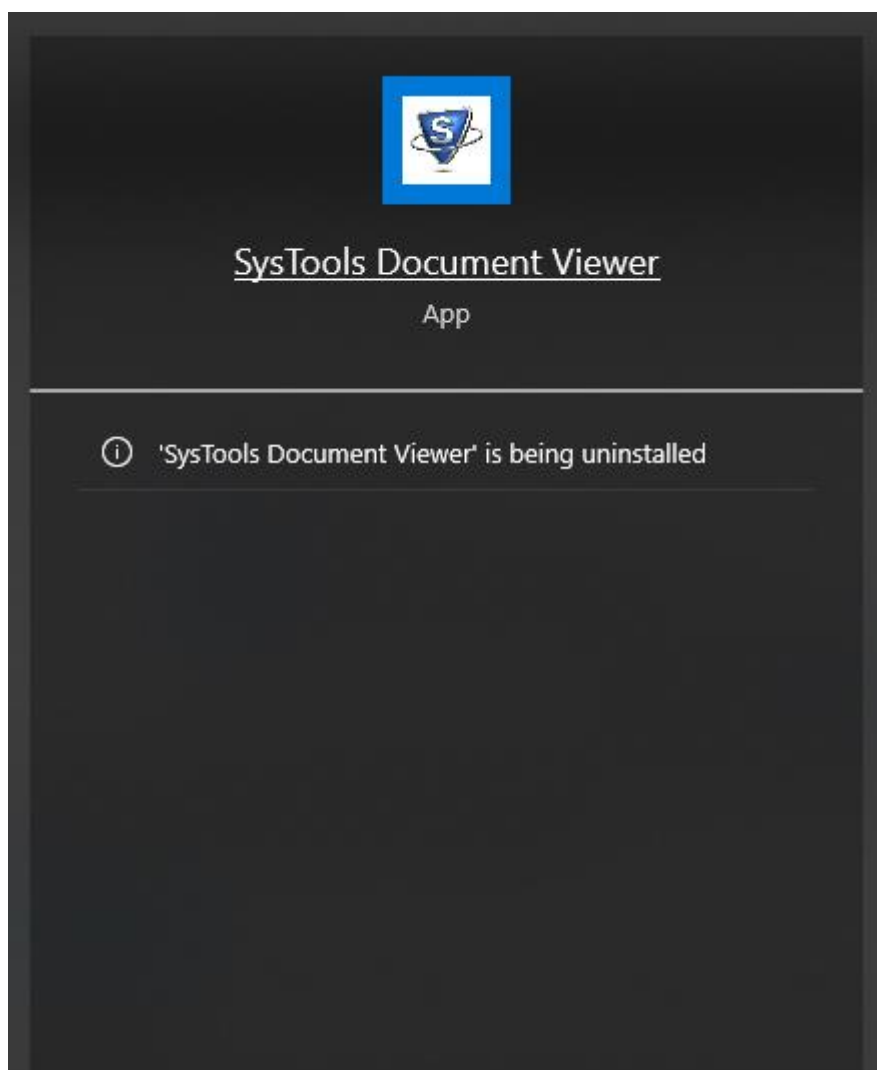

Go to Windows Search, Type SysTools Software Name and click on **Uninstall**.

Click on **Uninstall** in the confirmation box that reads “This app and its related info will be uninstalled”.

After clicking on the Uninstall button, you will see a message similar to “**SysTools Software is being uninstalled**”.

The software has been successfully uninstalled in the background. Another search will not show the software on your system.

If you are still having any difficulties while uninstalling **SysTools Software** on Windows OS, then, feel free to contact our support team. We are here for your assistance, **24X7**.
